PROFESSIONAL SUMMARY

Automation VA with remote experience building workflows in Zapier, HubSpot, Airtable, Slack, and Asana for an international team. I built 50+ automations that generate contracts and client assets, keep CRM and database records clean, and remove manual admin work. I map the process first, build and test each automation, and then hand it over with SOPs, Loom videos, and training for the people who use it. Computer Science graduate who uses webhooks, REST APIs, and JSON when a no-code tool hits its limits. Now learning n8n and Docker by building my own projects.

TECHNICAL SKILLS

Workflow Automation: Zapier (multi-step Zaps, webhooks, filters, paths, scheduled workflows), HubSpot Workflows, n8n (learning, building a personal project), Asana automation rules

Integrations and APIs: REST APIs, Webhooks, JSON data parsing, Postman, custom code steps (Node.js)

CRM and Databases: HubSpot CRM, HubDB, Airtable (schema design, formulas, data audits), SQL (working knowledge, Certiport IT Specialist Databases)

Scripting: Python (basic, I can read and understand code), Google Apps Script, and JavaScript (written with AI help)

DevOps: Docker (basic)

Documentation and Training: SOPs, process documentation, Loom video walkthroughs, staff training, and handoff for non-technical employees

Collaboration and Project Tools: Slack, Asana, ClickUp, Trello, Notion, Google Workspace, Loom

Data and Reporting: Excel, Tableau

IT Administration: Staff onboarding, password vaults, 2FA, and access setup

EXPERIENCE

Junior Tech Specialist | The Professional Builder | 2025 to 2026

- Built 50+ automations across HubSpot, Airtable, Zapier, and Slack that generate contracts, client assets, and team alerts, replacing 30 to 60 minutes of manual prep per contract.
- Connected CRMs, cloud drives, and task boards with REST APIs and webhooks so data synced in real time without manual copying.
- Audited Airtable bases and HubSpot properties across the business and fixed schemas, formulas, and time zone and DST errors.
- Set up scheduled workflows that run after delivery, plus Asana tracking boards, saving the team 10+ hours of admin per week.
- Trained non-technical employees on every automation I handed over, covering how to run it and what to do and not do, so they could handle it on their own.
- Wrote SOPs and documentation and recorded Loom videos for each automation, so staff had something to go back to after training.
- Handled IT onboarding, password vaults, and 2FA access for 30+ staff across Australia and New Zealand.

Head Video Editor | Hey Matt! | 2022 to 2025

- Set up asset management and production workflows so 15+ videos per week shipped on time across all major social media platforms.
- Managed client deadlines and created branding assets for client channels.

PROJECTS

Built as Junior Tech Specialist. Client names, data, and screenshots are left out on purpose. Full write-ups: charlesatienza.netlify.app

Client Onboarding Asset Pipeline | Zapier, Airtable, Google Drive, Google Docs, Gamma, Asana

- Built a 19-step Zap that creates a client's Drive folders, files their photos and logo, drafts a presentation with Gamma, creates the Asana task for the creative team, and writes every link back to Airtable.
- Added delays and a status check so the presentation has time to finish generating. Each new client now starts with organized assets and a draft presentation, with no manual setup.

Coach Lookup: 51-Step Workflow Down to 6 | HubSpot Workflows, HubDB, Custom code (Node.js)

- Replaced a 10-branch workflow (one branch per coach) with one custom code step that reads the assigned coach's name, email, and meeting link from a HubDB table and writes them to every associated contact and payment.
- Cut the workflow from 51 steps to 6. Adding or changing a coach is now a HubDB row edit, and workflows that hit the step limit can be merged. Documented the pattern in an SOP.

HubSpot Workflow Cut From About 50 Steps to 14 | HubSpot Workflows

- Rebuilt a workflow that copies client feedback scores from contacts to their companies, using one step per field that writes directly to the associated company.
- Same data reaches company records through a simpler workflow that is faster to change and easier to debug.

Contract Generation With Branching | Zapier, Airtable, Google Docs

- Built a Zap that branches by contract type, fills the matching Google Docs template with the record's details, and saves the document link back to Airtable.
- Part of the contract automations that replaced 30 to 60 minutes of manual prep per contract.

Referral Program Alerts | HubSpot CRM workflows, Google Sheets, Slack

- Built a workflow that starts on a referral form, checks and logs the referral in a spreadsheet, posts to Slack, and alerts the performance and success coaches.
- Everyone who needs to act on a referral hears about it as soon as the form is submitted.

Automated Performance Review One-Pagers | Zapier, Airtable, Google Docs

- Built a Zap that fills a Google Docs template with a review's fields, waits for the document to be ready, and saves its link on the Airtable record.
- Review documents come out consistent every time, without manual formatting.

Lead Intake Automation | n8n, Docker, Postman | Personal project (in progress)

- Set up n8n on my own machine using Docker and built a workflow that starts with a webhook to receive lead form data.
- Testing the webhook with Postman using sample data, then cleaning the fields and sending the lead to a CRM and a Slack alert.
- Applying what I already do in Zapier (webhooks, filters, CRM sync, alerts) to n8n and writing an SOP and Loom walkthrough for it like my work projects.

EDUCATION

Bachelor of Science in Computer Science, specializing in Machine Learning | National University Dasmariñas
Thesis: Optimization of Short Conversational Turns Transcription for Tagalog, Cebuano, and Hiligaynon: Integrating Transfer Learning and Quantization

CERTIFICATIONS, TRAININGS, AND AWARDS

- IT Specialist, Databases, Certiport (2024)
- Data Analytics and Visualization Essentials, DICT Cordillera Administrative Region (2025)
- Developer of Recognized Website, National University Dasmariñas (2025)
- Participant, International Symposium on Education, Artificial Intelligence, and Cybersecurity (ISEAC) 2025, University of the Philippines Open University (2025)
- InnOlympics: GDSC PLM Hackathon 2025, Google Developer Student Club, Pamantasan ng Lungsod ng Maynila (2025)
- TOP 8, Hack 4A Progress: Code, Compete, Conquer!, DOST Calabarzon (2024)
- Founder and President, Integrated Society of Information Technology Enthusiasts, NU Dasmariñas Chapter (iSITE NU D) (2022 to 2023)
